Security Telemetry Engineer | Detection Platform Engineering | Petabyte-Scale SIEM Pipelines

Cybersecurity engineer specializing in enterprise security telemetry architecture, detection engineering enablement, and large-scale log management platforms. Currently serving as technical lead supporting the Threat Detection and Log Management (TDLM) program at a Fortune 100 telecom company, assisting with the architecture and operational health of petabyte-scale security telemetry pipelines powering enterprise detection engineering and SIEM analytics. Experienced in both security data platform engineering and Blue Team operations, defending telecommunications infrastructure against nation-state-aligned threat activity while building telemetry pipelines that enable large-scale detection and threat hunting.

PROFESSIONAL EXPERIENCE

Cybersecurity Engineer — Program Lead, Threat Detection & Log Management (TDLM) Mar 2025 – Present
T-Mobile — Bellevue, WA

- Support telemetry ingestion pipelines processing petabytes of security log data daily across telecom infrastructure, contributing to one of the largest Splunk and Cribl environments in the industry.
- Assist with architecting and maintaining petabyte-scale telemetry pipelines supporting enterprise detection engineering and SIEM analytics.
- Support operational health and monitoring of large-scale log ingestion pipelines.
- Design and operate ingestion pipelines using Cribl and Vector to route and normalize telemetry.
- Integrate telemetry into Splunk, Microsoft Sentinel, Anvillogic, Cortex XSOAR, and Snowflake.
- Contribute to telemetry governance frameworks including OCSF normalization, ingestion validation, and log onboarding standards.

Cybersecurity Analyst May 2024 – Oct 2025
T-Mobile — Bellevue, WA

- Operated within Blue Team security operations protecting telecom infrastructure.
- Participated in defensive operations against advanced persistent threats and nation-state-aligned actors.
- Investigated enterprise incidents using ServiceNow CMDB correlation and SIEM telemetry.
- Developed automation and enrichment workflows in Cortex XSOAR.
- Supported detection engineering and threat intelligence during nation-state campaigns.
- Mentored junior analysts while serving as senior overnight analyst.

Associate Enterprise Information Security Analyst Dec 2023 – May 2024
T-Mobile — Bellevue, WA

- Supported Blue Team monitoring and response protecting telecom infrastructure.
- Managed security incidents using ServiceNow and Cortex XSOAR workflows.
- Performed CMDB-driven investigations correlating alerts with enterprise assets.
- Assisted threat intelligence teams during nation-state-aligned activity.
- Identified opportunities to automate data ingestion and response processes.

CORE EXPERTISE

Security Telemetry & Data Platforms	Threat Detection & Log Management (TDLM), Enterprise Log Ingestion Architecture, OCSF Normalization
Security Analytics Platforms	Splunk, Microsoft Sentinel, Anvillogic, Snowflake, Cortex XSOAR
Data Pipeline Technologies	Cribl, Vector, Syslog/API integrations, Streaming telemetry pipelines
Cloud & Infrastructure	Azure, AWS, Linux, macOS, Hybrid cloud logging architectures
Automation & Analytics	Python, PowerShell, Bash, SPL, KQL, SQL

EDUCATION

Trident Technical College

Charleston, SC

Associate Degree, Cybersecurity (In Progress) — GPA 4.0

TECHNOLOGIES & PROFESSIONAL DEVELOPMENT

Working toward SANS GIAC certifications. Experience with OpenVAS, Nessus, LimaCharlie, and virtualization environments.
